

IAM - Application and System Identity Access Management

Cloud Activ8's Secure Identity & Access Management (IAM) platform ensures the right employees have the right access to the right resources... all from the right devices and approved locations.

Cloud Activ8 is the industry's first Secure IAM platform that combines multi-factor authentication (MFA), single sign-on (SSO), and password management (PM) along with proprietary dark web monitoring to detect if user credentials have been compromised and are for sale on the dark web.

PROTECT MACHINES

Control access to Windows desktops, servers, machines, data and more by adding multi-factor authentication (MFA) protection

Deploy automatically through your Remote Management & Monitoring platform and instantly ensure that the right people have access to the right things. Allow technicians to reserve users on shared accounts to protect privileged accounts with MFA

The Secure IAM platform that combines multi-factor authentication (MFA), single sign-on (SSO), password management (PM) along with proprietary dark web monitoring to detect if user credentials have been compromised and are for sale on the dark web.

PROTECT APPLICATIONS

Configure Single Sign-On (SSO) for your business applications with easy access from your Launchpad. Quick support for SAML 2.0, OpenID Connect and more. Store passwords for other sites and automatically fill them in for web applications that don't support SSO

- Control access to Windows desktop and servers
- Require MFA to access machines
- Ensure that only the right groups are getting access to the servers
- Allow techs to "reserve" users on shared accounts to protect privileged accounts with MFA

PROTECT CREDENTIALS

Protect shared credentials from unauthorized access and log all password views with Secure Shared Password Vaults. Securely store all types of passwords for machines, networking, applications and websites. Automate rotation of Active Directory and local Windows passwords

From automated employee onboarding and provisioning to one-click offboarding, Cloud Activ8 simplifies the complex to meet your evolving security demands. Avoid lost, weak or stolen passwords. Every organization, regardless of size, must implement a secure identity & access management platform to protect their digital identity, their data, and their business continuity. Cloud Activ8's Secure Identity & Access Management (IAM) platform ensures the right employees have the right access to the right resources all from the right devices and approved locations.

- Protect shared credentials within Password Vaults

- Give access to only those users who should have access to credentials
- Log all password views
- Securely store all types of passwords for machines, networking, applications, and websites
- Auto-rotate passwords when viewed for Windows and Active Directory accounts

Universal User Directory

- User self-enrolment & self-management
- Sync users and groups with Active Directory
- Federate users and groups with Azure AD
- Shared and service account 2FA routing
- Separate customers or divisions with multi-org support

Multi-factor Authentication

- MFA with Cloud Activ8 Authenticator for iOS and Android
- MFA with YubiKeys or similar hardware tokens

Device Trust

- Windows Logon Agent to protect machines when users are logging in
- Trust devices by users for simplified access
- Identify device risk based on IP Reputation

Configurable Authentication Policies

- Adaptive authentication & policy enforcement
- Assign and enforce security policies globally or per application Enforce policies based on authorized networks
- Enforce policies based on user's location
- Assign and enforce security policies per user group

Secure Application Access & Single Sign-On (SSO)

- Unlimited application integrations
- SSO for all cloud applications supporting SAML 2.0 or OpenID Connect
- Web workflows for web sites that do not support Single Sign On Secure access to internal company web applications
- Secure access to specific internal servers via SSH Secure remote access to applications hosted in AWS, Azure, and GCP
- Auth API to protect your web services and APIs
- OAuth 2.0 to protect system or service integrations
